

THE MENOPAUSE
CLINIC

Bio-identical Hormone Replacement
Therapy, Anti-aging from within.

About Deborah Vines

Thank you for choosing The Menopause Clinic. The clinic is run by Deborah Vines, who is also the Owner and Founder of the Face Medical Clinic, and has specialised in both bio-identical Hormone Replacement Therapy (BHRT) and Aesthetics for over 15 years.

Deborah practices a unique approach to optimise health and wellbeing. This approach combines education, personalised treatment plans, and the highest standards of care to replenish and balance both hormones and overall health - achieving optimal empowerment, restoring energy and happiness, and providing life-changing results for her patients.

Your Health & Hormones

It is really important (for both men and women) that we have a balanced endocrine system – when our hormones are balanced we feel more in control, we are much healthier, and our energy levels are a lot higher.

Balancing our hormones can be much easier said than done as we get older because there is a natural decline in hormones such as oestrogen, progesterone and testosterone as we age. If you are experiencing any of the following, then you may benefit from BHRT with Deborah Vines:

- Hot flushes
- Depressive symptoms
- Low Mood
- Mood swings
- Memory loss
- Low libido
- Difficulty sleeping
- Night sweats
- Sexual dysfunction
- Osteoporosis
- Wrinkled skin
- Dry skin

What Are Bio-identical Hormones?

All bio-identical hormone treatments that are prescribed by Deborah Vines are individually tailored to suit each patient's needs and requirements and come in the form of creams, lozenges or capsules, depending on which is most suitable.

The bio-identical hormones are completely identical in chemical structure to those that are found in the human body, but are derived from plants, and are based on a substance known as "Diosgenin", which comes from Mexican yams.

Hormone Health Checks At The Menopause Clinic

Patient journeys for both men and women at The Menopause Clinic will start with an in-depth and comprehensive consultation with Deborah Vines, which will cover your medical history, lifestyle factors, nutrition and health risks, as well as any other queries or concerns that you may have about the treatment.

The next step is a health check, which includes a physical examination, and then a set of blood tests, which assess your hormone and vitamin D levels.

Additional tests for women may be recommended, which include: mammogram, ultrasound scan of the uterus, and a DEXA scan for bone density.

Initial blood tests will be carried out at The Menopause Clinic, but if extra testing is required then this may be referred subject to a patient's needs. If the tests determine that a patient could benefit from BHRT, then Deborah will create a bespoke and custom-tailored treatment plan including hormones and supplements.

Many men and women voice that they feel much better on bio-identical hormones; recent American research also estimated that between 30-60% of post-menopausal women receiving hormone replacement treatment are taking some form of BHRT.

The Menopause Clinic Treatment Schedule

Annual Consultation 60 Minutes

£250

During your appointment, Deborah will spend time taking a full medical history and recording all the symptoms that you may be experiencing.

You will also be given the opportunity to ask any questions regarding bio-identical hormones and your treatment here at the clinic.

By law, a face to face Consultation is required annually to enable the clinic to prescribe BHRT and it also gives Deborah an opportunity to assess your symptoms and possibly adjust your prescription.

Annual Blood Test And Analysis

£245

Following your initial consultation, Deborah will need to perform a blood test to determine your current hormone levels; the results from this will also act as a baseline.

Blood tests are taken and analysed annually to maintain your optimum hormone levels and make any changes to your prescription if needed.

Telephone Consultation (one week after your Consultation & Blood Tests)

no
cost

During this telephone appointment, Deborah will give you the results of the blood tests from your first consultation. She will then advise you of any medication that is needed, and address any symptoms identified by your blood results and symptoms.

Should treatment be required, Deborah will write and order your personalised prescription and instruct you how to contact the Compounding Pharmacy to order your medication. This prescription will last for two months.

Pricing

Two Month Review (via telephone)

This review will enable Deborah to assess your progress and make any adjustments to your medication as necessary. Deborah will write a further two prescriptions, lasting for four months.

You will have the opportunity to ask any further questions that you may have regarding your BHRT treatment.

Six Month Review (either via telephone or clinic visit) (£245 if further blood tests required)

This six-month review will enable Deborah to give you a full assessment of your treatment and to perform any further testing if required and to determine your progress.

Deborah may also advise additional testing, such as a mammogram, ultrasound scan of the uterus, and a DEXA scan for bone density, depending on your symptoms and test results. We have the facility to refer you if required to appropriate trusted partners if necessary.

Ongoing Reviews (via telephone) – 15 minute call

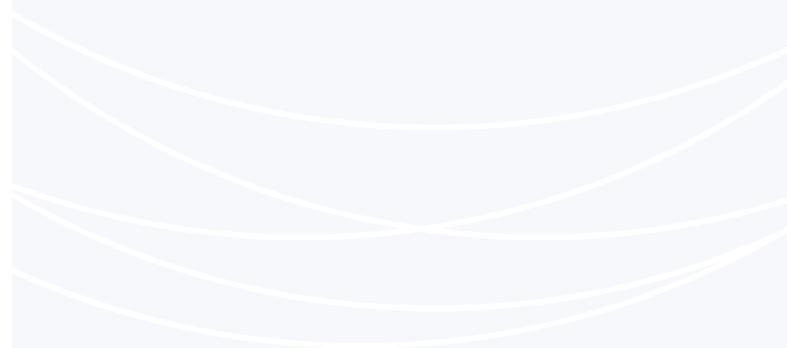

This will enable Deborah to review your progress and make any adjustments to your treatment plan.

Throughout your journey at The Menopause Clinic, you will consult with Deborah in the clinic, or via the telephone, as well as having blood tests to help her diagnose and treat your symptoms.

Please note: blood tests are charged separately and the cost of your medication is payable to the Compounding Pharmacy.

There is a finance package that we can offer you to cover the annual cost of your treatment and medication. Please enquire in clinic regarding this service.
